

# SNUBBERS

## INSPECTION AND OVERHAUL

### Safety first

- Snubbers protect pipes and other components from overload caused by dynamical events, e. g. pressure shocks, earth quakes
- Their proper function is essential for a safe operation of the plant

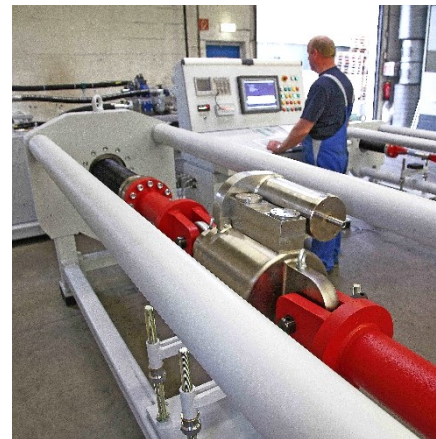

### Maintenance recommendation

- Regular inspection:  
Visual inspection, once a year
- Extended inspection:  
Function test, latest after 12 years
- Complete overhaul:  
Latest after 23 years

Based on the actual operation conditions like

- Increased vibration
- Increased ambient temperatures
- Increased activity cycles
- Soiling
- Aggressive atmosphere

above mentioned periods might need to reviewed

### Our services, your benefits

- Tailor-made solutions for reduced downtime and operational safety
- Highly qualified LISEGA engineers for inspection
- On-site testing with mobile test bench
- Repair exchange system
